A set of utilities for faster development of GraphQL Schemas

GraphQL Tools is a set of NPM packages and an opinionated structure for how to build a GraphQL schema and resolvers in JavaScript, following the GraphQL-first development workflow.

Get Started

GraphQL-first philosophy

Use the GraphQL schema definition language to generate a schema with full support for resolvers, interfaces, unions, and custom scalars.

Mock your GraphQL API

With GraphQL Tools, you can mock your GraphQL API with fine-grained per-type mocking for fast prototyping without any datasources.

Read more

Stitch multiple schemas

Automatically stitch multiple schemas together into one larger API

st and powerful way.
